Operations Library

User Guide

An operation is a controlled modelling instruction applied to a case profile.

It changes timing, scale, production, cost, CAPEX or transaction assumptions – without manually rebuilding the source profile.

Same source data, applied consistently – no manual profile rebuild.

Why operations matter

CONSISTENT, REPEATABLE, AUDITABLE

Operations replace ad-hoc spreadsheet edits with a controlled, transparent way to build scenarios.

01

Faster scenario creation

Build cases in a few inputs rather than hours of rework.

02

Controlled assumptions

Every change is explicit, parameter-driven and visible.

03

Consistent metric treatment

Impacts flow through the model the same way each time.

04

Easier comparison

Cases and scenarios stay directly comparable.

05

Less manual manipulation

Fewer spreadsheet errors and version-control risks.

Operation library overview

TWELVE OPERATIONS, FOUR CATEGORIES

Default 1

Baseline

- No Change

Timing 4

When it happens

- Delay
- Accelerate
- Truncate Before
- Truncate After

Scale 2

How much of it

- Farm In
- Farm Down

Input metric 5

The value itself

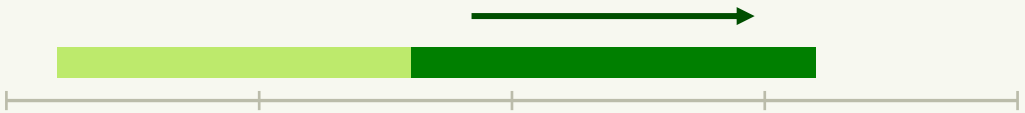

- Production Change %
- OPEX Change %
- CAPEX Change %
- CAPEX Change $m
- OPEX Change $m

Timing operations

SHIFT OR TRIM THE PROFILE ALONG THE YEAR AXIS

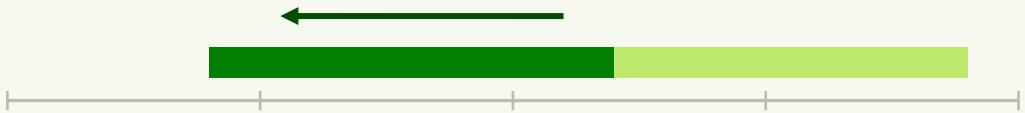

Delay

Moves the profile later. Optional delay penalty and penalty year.

Accelerate

Moves the profile earlier. Optional funding requirement and funding year.

Truncate Before

Removes all values before the selected year.

Truncate After

Removes all values after the selected year.

Scale and transaction operations

RESIZE THE PROFILE – AND CAPTURE THE DEAL

Farm In

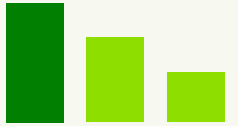

Increase

Increases the selected profile to reflect a larger working interest.

Can include an acquisition payment ($m).

Farm Down

Dilution

Reduces the selected profile to reflect a smaller working interest.

Can include disposal proceeds ($m).

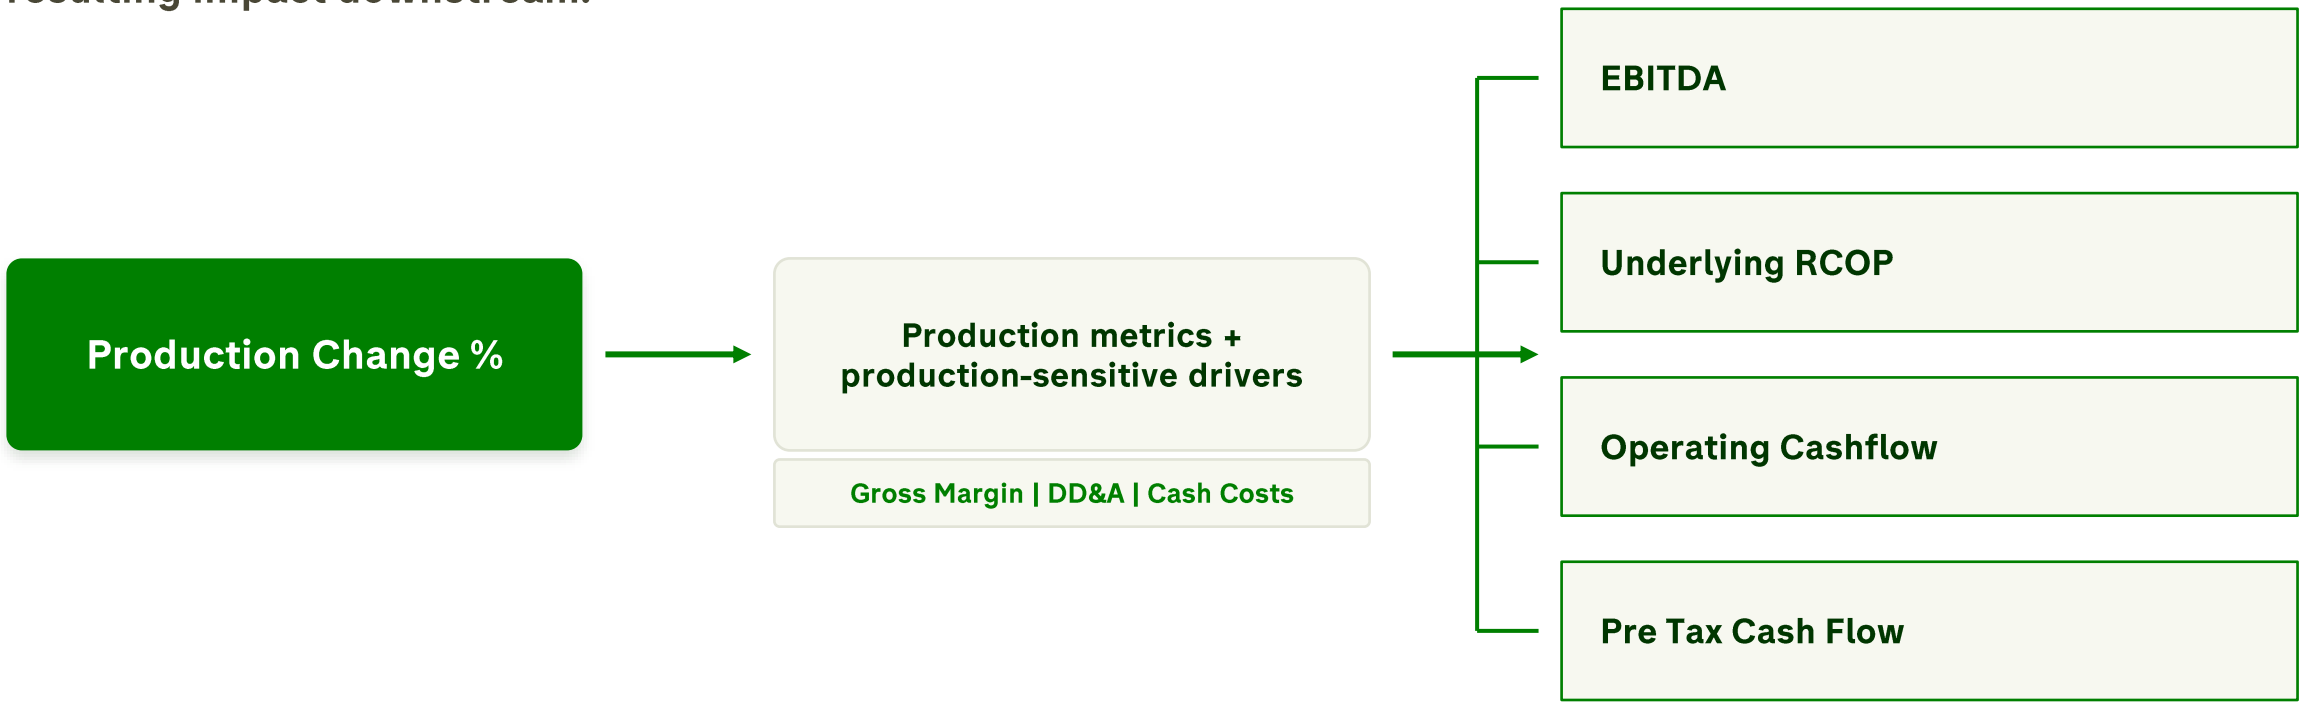

Where proceeds land

Acquisition payments and disposal proceeds flow into **Cash Flow from Sale of Operations** and, in turn, **Pre Tax Cash Flow**.

Production adjustment

PRODUCTION CHANGE %

Production Change % scales production metrics and production-sensitive financial drivers, **then propagates the resulting impact downstream.**

Note Composite metrics do not always move by the same percentage – they include other fixed or unaffected items.

Cash Cost and Cash Capex adjustments

PROPORTIONAL OR SPECIFIC $M CHANGES

Cash Cost Change %

Adjusts **Total Cash Costs** proportionally

Cash Capex Change %

Adjusts **Cash Capex** proportionally

Cash Cost Change $m

Specific annual **cost additions / reductions**

Cash Capex Change $m

Specific annual **funding additions / reductions**

Worked example – Cash Capex Change $m

Specific ± $m adjustments applied to Cash Capex by year

Year	Cash Capex base ($m)	Change ($m)	Adjusted ($m)
2027	120	**+15**	**135**
2028	90	**–10**	**80**

Reductions carry a minus sign; additions a plus. Each year is set explicitly.

Parameter design

One generic Input 1–5 structure for every operation. The same five-input structure supports different operation types while keeping the Excel interface consistent.

Operation	Category	Description	Input 1 Label	Req	Input 2 Label	Req	Input 3 Label	Req	Input 4 Label	Req	Input 5 Label	Req
No Change	Default	Retains profile unchanged	n/a	-	n/a	-	n/a	-	n/a	-	n/a	-
Delay	Timing	Moves profile later	Years to delay (Yrs)	**Yes**	Delay penalty ($m)	***Optional***	Penalty year	***Optional***	n/a	-	n/a	-
Accelerate	Timing	Moves profile earlier	Years to accelerate	**Yes**	Funding required ($m)	***Optional***	Funding year	***Optional***	n/a	-	n/a	-
Farm In (Increase)	Scale	Increases selected profile	Increase (%)	**Yes**	Effective start year	***Optional***	Effective end year	***Optional***	Acquisition payment ($m)	***Optional***	Payment year	***Optional***
Farm Down (Dilution)	Scale	Reduces selected profile	Dilution percentage (%)	**Yes**	Effective start year	***Optional***	Effective end year	***Optional***	Disposal proceeds	***Optional***	Proceeds year	***Optional***
Truncate Before	Timing	Removes values before year	Retain profile from year	**Yes**	n/a	-	n/a	-	n/a	-	n/a	-
Truncate After	Timing	Removes values after year	Retain profile until year	**Yes**	n/a	-	n/a	-	n/a	-	n/a	-
Production Change %	Input metric	Adjusts production by a %	Percentage change	**Yes**	Start year	***Optional***	End year	***Optional***	n/a	-	n/a	-
OPEX Change %	Input metric	Adjusts OPEX by a %	Percentage change	**Yes**	Start year	***Optional***	End year	***Optional***	n/a	-	n/a	-
CAPEX Change %	Input metric	Adjusts CAPEX by a %	Percentage change	**Yes**	Start year	***Optional***	End year	***Optional***	n/a	-	n/a	-
CAPEX Change $m	Input metric	Adjusts CAPEX by $m	Change Yr1 (± $m)	**Yes**	Year 1	**Yes**	Change Yr2 (± $m)	***Optional***	Year 2	***Optional***	n/a	-
OPEX Change $m	Input metric	Adjusts OPEX by $m	Change Yr1 (± $m)	**Yes**	Year 1	**Yes**	Change Yr2 (± $m)	***Optional***	Year 2	***Optional***	n/a	-
